FlowFi

INVESTOR OVERVIEW · UPDATED NOVEMBER 11, 2026

The attention engine for crypto.

FlowFi turns thousands of new Solana tokens into a short, verified list, explains what is moving, and lets you act on it in one tap. Now with a live token and staking, FLUX (an AI companion that talks, listens and trades), an open launchpad and the site in five languages.

NOISE → CLARITY → ACTION

THE PROBLEM

Crypto attention is noisy, late and scattered.

1

Too many tokens

Thousands of new tokens launch on Solana every day. Most are noise, many are traps. Finding the few with real buyers is a full-time job.

2

Signals arrive late

By the time a token trends, the early move is gone. Traders chase screenshots and calls they can't verify.

3

Five apps, one decision

Discovery, charts, research, wallet and execution live in separate tools. Every hop costs time and exposes keys.

> FlowFi's answer: one platform where discovery is verified on-chain, results are public, and execution is built in and secure by design.

THE PLATFORM

One place to see it, understand it and act on it.

LIVE + Early Radar

The 20 strongest Solana tokens right now, verified on-chain, plus up to 10 brand-new pools on Early Radar, seen from their first minutes. All of it on The LIVE Map.

Terminal WHOLE MARKET

The whole Solana market on one board: trending tokens, large caps and verified projects. Live charts with FlowFi markers and safety context, one-tap trades from a built-in wallet.

FLUX COMPANION

FlowFi's AI on every page, in your language: talks, listens, guides new members and remembers each account. On Telegram he trades: one tap, take-profit, stop-loss. His own strategy practice-trades in public.

Results

A public ledger of every catch (over 6,100 tokens), measured from the first moment FlowFi saw the token, with its price history after. No hindsight, no edits.

Mobile apps

iPhone app submitted to the App Store; Android in closed testing. Easy mode, push alerts for every Early Radar catch, FLUX and Results.

FlowFi Pro HOLD $FLOWFI

Unlocked by holding $FLOWFI: perps, the Private room, instant alerts, Pro charts, FLUX Pro, a 0.50% fee and deeper history.

Wallet + Private room

Non-custodial, no seed phrase: sign in with Google and it's created and secured in one tap. Plus a private portfolio encrypted on Solana.

Network

Profiles, follows and Insights backed by a real position ($5+), paid bounties with FlowFi Pay, and an Insight Contest with prizes.

$FLOWFI + Studio STAKING

$FLOWFI launched November 2 on FlowFi's own launchpad. Staking Round 1 is open: lock 1 to 12 months. Studio launches and FlowFi Verified are open to every creator.

TRACTION · AS OF NOVEMBER 11, 2026

Growing fast, and all of it in public.

2,263
MADE IT TO THE LIVE MAP
out of 6,145 tokens FlowFi caught early

> Live numbers from FlowFi's database and the public Results page (flowfiengine.app/results). Peak is the highest price seen after the catch; past results don't predict future ones.

FLOWFI PRO · FOR $FLOWFI HOLDERS

Hold $FLOWFI. Pro is yours.

Perps

Long or short SOL, ETH and BTC, TP and SL on the chart, liquidation warnings.

Private room

A private portfolio encrypted on Solana: SOL, USDC, USDT, Tesla, S&P 500. Swap between holdings, send to members privately.

Instant Early Radar

Every catch the second it happens, with its FlowFi Trust score: in the app, on Telegram and by email.

Pro charts

RSI, MACD, Bollinger, your own levels and trendlines, alerts on your lines.

FLUX Pro

50 AI reads a day, analysis right on the chart, majors' trend and sentiment.

Lower fee

0.50% instead of 0.75% on every trade, with a meter of what it saved.

Deeper history

Every token at 1h, 6h, 24h and 7d after the catch, and how similar tokens did.

Smart alerts

Big moves, volume spikes, liquidity pulls and safety alerts on what you hold.

HOW TO GET IT

Hold

$FLOWFI in your own wallet

$20 for Pro, **$100** for Pro+, **$250** for Pro Elite. Nothing to pay, no subscription

Pro turns on the moment a linked wallet holds enough; 3 days of holding locks it in

THE PRIVATE ROOM · FLOWFI PRO

Privacy in your pocket.

Encrypted on Solana

Balances sit encrypted on-chain. Only the member's passkey reveals them; FlowFi stores nothing.

A private portfolio

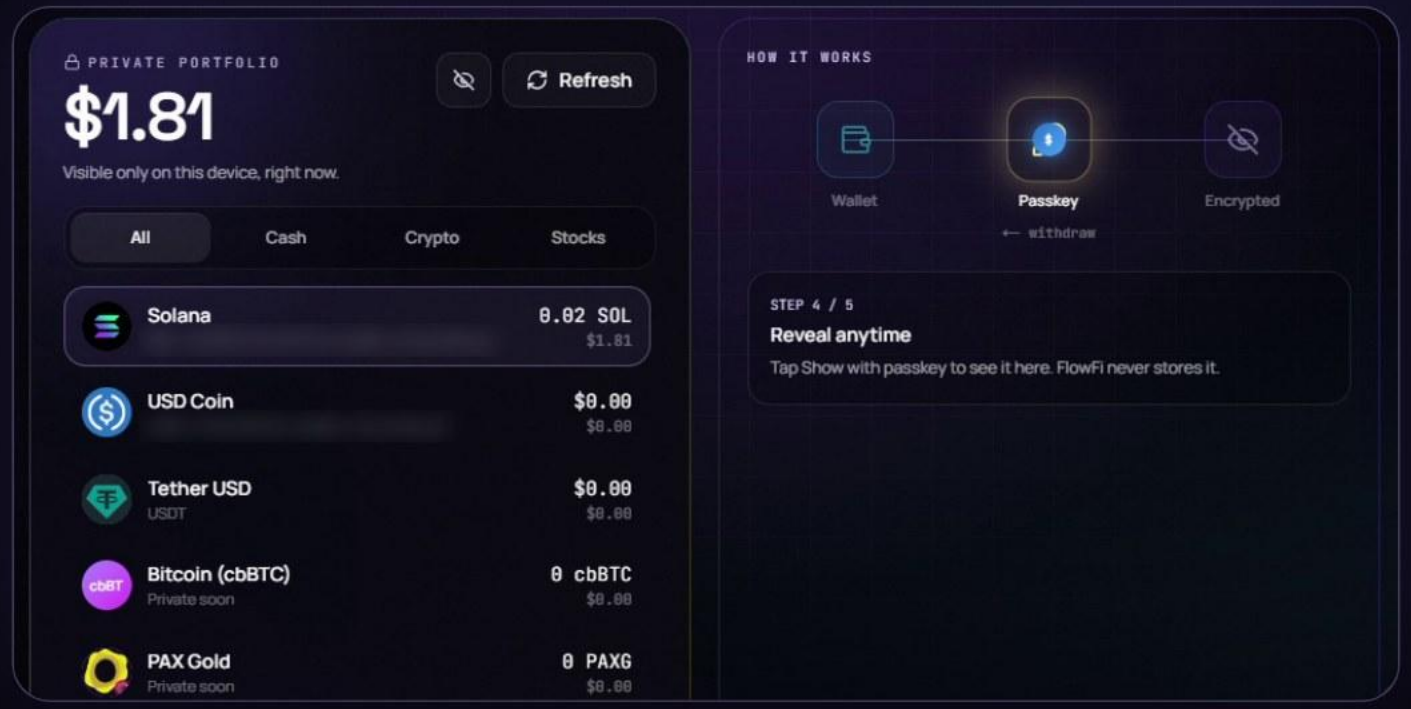

SOL, USDC, USDT, Tesla (TSLAx) and the S&P 500 (SPYx) today; gold and more as their private pools open.

Swap in one tap

Move between holdings and they are sealed again right after.

Private sends

Pay another member with no on-chain link between them, or just tell FLUX: "send 10 USDC to @friend privately".

Real test, November 5: 0.02 SOL in, sealed, revealed, back out. Wallet amounts blurred.

Powered by Umbra on Solana, built on Arcium's confidential computing. The trade inside a Swap is a normal Solana trade; holdings stay private before and after it. Tokenized stocks are issued by third parties and not available in every country.

MOBILE · IPHONE AND ANDROID

FlowFi in your pocket.

Status

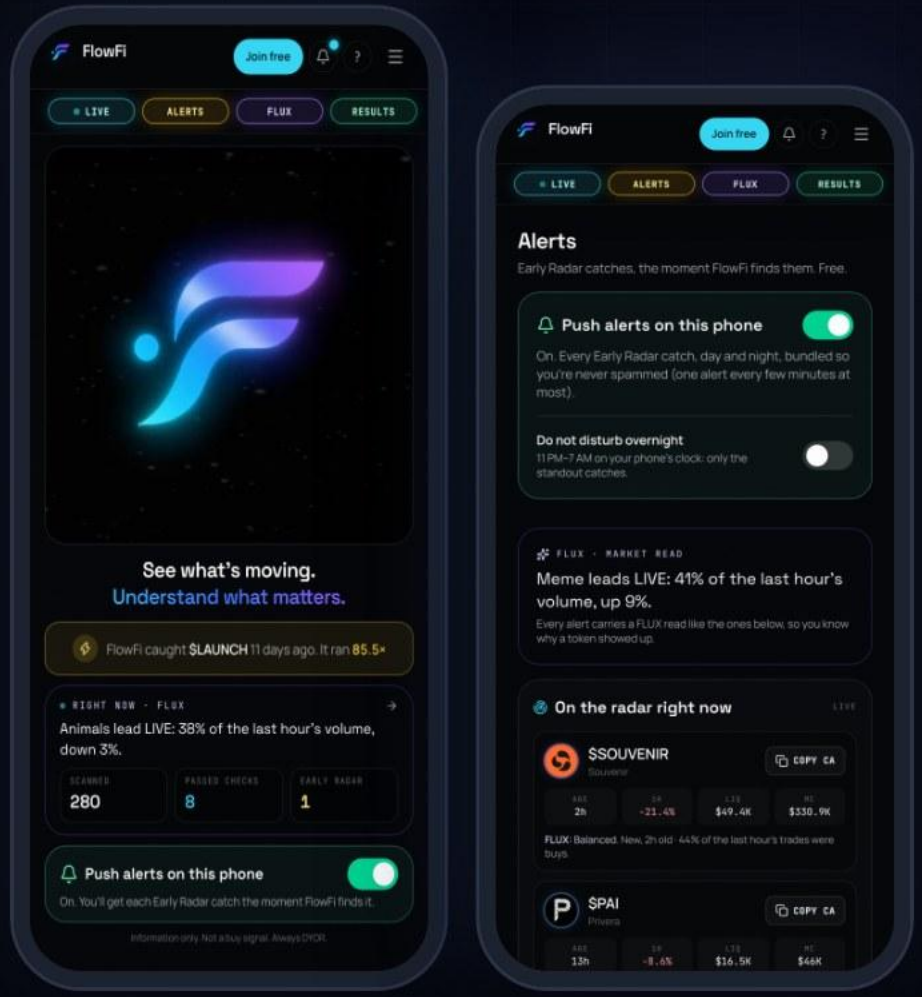

iPhone: submitted to the App Store on November 5. **Android:** closed testing on Google Play. A 56-person app waitlist gets it first, with one hour of early access.

Built for everyone

Easy mode: LIVE, Early Radar push alerts for every catch, FLUX reads and Results, with Copy CA to use a token anywhere. Free.

App-store ready

Trading, the Private room, token rewards and Pro purchases stay on the web, so the apps follow Apple's and Google's crypto and payment rules.

FLOWFI INTELLIGENCE · READING SOLANA EVERY 30 SECONDS

Three signals in. One clear read out.

Money
Real buyers verified on-chain, fresh volume and liquidity.

Attention
Trading momentum and X mentions picking up speed.

Safety
Liquidity depth, buyer quality, pool age, mint and freeze authority, checked every pass.

20 + 10
LIVE tokens + Early Radar pools

2,263
Made it to The LIVE Map, all on public Results

> Fail closed: anything unsafe or unknown is removed before ranking, and if a data source is down FlowFi keeps the last valid snapshot and says so. It never fills gaps with guesses.

PRODUCT PROOF · CAUGHT OCTOBER 11, 2026

$Dacity: 184.6× from FlowFi's first detection.

Pool age at catch	6 min
Initial liquidity	$26.1K
Initial 5m volume	$165.5K
Initial 5m transactions	2,108
Peak market cap	$16.6M
From first catch	184.6×

FlowFi's own records, observed every 30 seconds. Every catch, winners and losers, is public at flowfiengine.app/results. Since then: $HIGH 42× from $82.3K, $PAWCAT 25×, $RICO 21×. Past results don't predict future ones.

BUSINESS MODEL

Revenue grows with activity, not with hype.

STREAM	HOW IT EARNS	STATUS
Trading fee	0.75% on every trade in the Terminal, Quick Mode and FLUX on Telegram (0.50% on Pro; 0.60% with a 30-day referral code)	LIVE IN BETA
FlowFi Pro	Unlocked by holding $FLOWFI ($20 Pro, $100 Pro+, $250 Pro Elite): drives demand for the token. Paid plans return later	LIVE · HOLDERS
Perps fee	0.05% of position size on open and on close, on top of the market's own fee	LIVE (PRO)
FlowFi Pay	2.5% on member payments and bounties in SOL or USDC (1% when paid in $FLOWFI)	LIVE
Studio launches	$19 per launch, paid in $FLOWFI (20% off, half burned, half to holders): review, verified badge, project page, Terminal spotlight. FlowFi takes nothing from creators' trades	LIVE SINCE NOV 10
Project verification	$49 FlowFi Verified review for existing tokens, paid in $FLOWFI, refunded if not approved	LIVE SINCE NOV 10
Intelligence API	Paid API tiers for LIVE, Early Radar, Results and FLUX data, metered by usage	NEXT
$FLOWFI creator reward	The creator reward on every $FLOWFI trade: half back to holders through the FlowFi Wheel, half to FlowFi	LIVE SINCE NOV 2
Swaps in the Private room	0.25% FlowFi fee on each swap between private holdings	LIVE

> Free stays free: LIVE, Early Radar, Results and basic FLUX never sit behind a paywall or a token.

LAUNCHPAD + $FLOWFI

Built on Pump.fun's rails. FlowFi brings the tools.

Our approach

Studio launches use the official Pump.fun SDK: the same bonding curve and graduation to PumpSwap that the market already trusts. FlowFi isn't competing with it. FlowFi gives projects better tools to upgrade their launch.

- **Review and FlowFi Verified badge** before the launch
- **Project page, Terminal spotlight** and a live chart on FlowFi from the first minute
- **Launch and first buy in one transaction**, so the creator's buy is the first trade
- **Server-verified, creator-signed:** built and checked by FlowFi, signed only by the creator (passkey or Google)
- **Protected name:** official-contract registry and a filter against copycat tokens
- **Creators keep 100%** of the creator reward. FlowFi earns the $19 launch fee only

$FLOWFI: live since November 2

TO HOLDERS	TO FLOWFI
50%	50%

Launched on FlowFi's own launchpad and bonded on November 3. Half of the creator reward on every trade goes back to holders.

- **The FlowFi Wheel:** 13.64M $FLOWFI paid since Nov 3 to the top 100 holders (wallet + staked)
- **Staking:** lock 1 to 12 months in an on-chain vault; 12 months ends at 3.5×
- **Burns:** 14.44M burned (1.44% of supply); half of every service paid in $FLOWFI
- **Utility:** hold $20, $100 or $250 for Pro, Pro+ or Pro Elite; pay for launches, verification and FLUX

The earlier token on Meteora was a test, not $FLOWFI.

1B FIXED SUPPLY · TEAM PAID IN USDC, NEVER IN $FLOWFI · OFFICIAL CONTRACT ONLY ON FLOWFIENGINE.APP/OFFICIAL

TRADING INFRASTRUCTURE

One tap for the user. Six checks behind it.

1 · Quote

Best route across Solana liquidity via Jupiter

2 · Build

FlowFi builds the exact transaction server-side, with its fee as the last instruction

3 · Verify

Program allow-list, signer set, SOL destinations and fee re-derived independently; buys over 5% price impact refused

4 · Sign

A restricted signing key that can only approve swaps, perps orders and FlowFi's fee, enforced by the wallet's own policy engine

5 · Send

Broadcast with preflight through Helius, confirmation polled in parallel

6 · Record

Settled fills reconciled into a ledger that drives PnL, XP and cashback

One tap, also on Telegram

Activated once with a passkey or Google. Then each trade is one tap on the site or in FLUX's private chat, with take-profit and stop-loss that sell automatically.

Fast fills

Gates, mint checks, lookup tables and blockhash run in parallel; confirmation is polled every 400 ms.

Launches use the same rails

Studio launches are built, simulated and verified the same way, then signed by the creator.

SECURITY ARCHITECTURE

Security built into every layer.

No seed phrase

Keys are generated and held in Turnkey's secure enclaves. There is no phrase to leak or phish, and FlowFi never sees the key.

Passkeys or Google

Sign-in and approvals use a passkey bound to flowfiengine.app, or the member's Google account, which secures the wallet in one tap.

Withdrawals locked

Every withdrawal is confirmed by the member; new addresses wait 24 hours on a whitelist; the exact transaction is checked; a receipt follows by email.

Fenced trading permission

A wallet policy limits the trading key to swaps, perps orders and FlowFi's fee. It cannot send funds to any other address.

Server-verified transactions

Nothing is signed blind. Every transaction is built, simulated and checked against allow-lists; the signed bytes must match the reviewed message.

Locked browser

No third-party scripts. The browser refuses any script or data destination that isn't FlowFi's, and other sites can't frame FlowFi.

Anti-impersonation

A write-once official mint registry, an official-CA page, a filter that keeps fake "FlowFi" tokens out of the product, and a Telegram guard that removes fake contracts and scam links.

Private room

Balances encrypted on Solana with confidential computing; private sends leave no on-chain link. The passkey signs only exact, pre-checked transaction shapes.

Fail closed

Any unknown or mismatched state stops the action. Row-level security and immutable receipts; real-money features ship behind founder switches.

> Security checks run twice a day, every day, and a public summary is published at flowfiengine.app/security.

INFRASTRUCTURE PARTNERS

Built on the strongest rails in Solana.

Solana
Settlement layer: fast, low-cost, where new-token activity happens.

Turnkey
Non-custodial embedded wallets, secure enclaves, passkeys and the signing policy engine.

Jupiter
Swap routing for every Terminal trade, and Jupiter Perps for SOL, ETH and BTC positions.

Pump.fun
Launch program behind FlowFi's launchpad: bonding curve, then graduation to PumpSwap.

Helius
RPC, transaction history and on-chain buyer verification.

CoinGecko
Market data and candles for charts and Results.

Supabase
Postgres ledgers with row-level security and audited functions.

Vercel
Global hosting, edge delivery and privacy-filtered analytics.

Anthropic + OpenAI
Claude powers FLUX's reads; image models make Studio artwork. Both inside strict quotas.

Umbra + Arcium
Encrypted balances on Solana behind the Private room, on Arcium's confidential computing.

Expo
One codebase for the iPhone and Android apps, with native push alerts.

Telegram + X
Verified community connections, private Pro alerts and the community recaps.

> FlowFi's own code connects these rails: discovery, verification, ranking, results, risk checks and the transaction guards are FlowFi's.

ROADMAP

Where FlowFi goes from here.

LIVE NOW

Catch it. Trade it. Prove it.

- The LIVE Map; Early Radar from a pool's first minutes
- FlowFi Firewall: bundled launches blocked
- Public Results from the first moment
- Terminal: the whole Solana market
- FLUX in your language; trades on Telegram
- $FLOWFI staking, Wheel, burns, holder Pro
- Studio + FlowFi Verified

BUILDING NOW

More reach, sharper reads

- iPhone app in App Store review; Android in testing
- Robinhood Chain and BSC on The LIVE Map (in testing)
- Limit orders in the Terminal and on Telegram (in testing)
- One wallet for every market: deposits first
- FLUX auto-trading, practice-traded in public first
- Deeper signals across X, wallets and money flows

NEXT

Trade with a plan

- More markets: Ethereum, Base, Hyperliquid and Elysium
- Protected trading
- Intelligence trained on FlowFi's own Results
- A paid Intelligence API for partners

LATER

Network effects

- Copy trading from proven wallets
- Trading and the wallet in the mobile apps
- Tokenization
- A deeper Private room

Directional, not a delivery schedule. Each step ships when it passes its own checks.

FlowFi

See what deserves attention.
Act on it safely.
